Support for DAMAP

Use this button to get help and support for our DAMAP tool.

DAMAP is an open source solution that serves as a tool for machine actionable DMPs (maDMPs). DAMAP was developed in collaboration with TU Wien and is under continuous improvement. DAMAP will be adapted to the institutional requirements of TU Graz (e.g. design, integration of existing databases) and will be available to all researchers for the creation of their data management plans.

DAMAP will undergo a closed testing phase in the coming months for which we are still looking for volunteers. If you are interested or would like more information, please contact the RDM team.

In the following video you can get a quick overview of DAMAP:

Research Data Management at TU Graz

The Research Data Management (RDM for short) website aims to increase the awareness of RDM issues and to foster the adoption of RDM practices on the part of TU Graz researchers.

Research Data Management pertains to all steps taken along the data lifecycle to ensure that research data can be found, are accessible to others (whether other researchers or other interested parties), and are described (e.g. through proper metadata) in such a way that they can be reused by others. TU Graz has recently put into effect a policy governing the management of all research data generated/gathered by researchers working at TU Graz.

Here, we provide information on all aspects of RDM and this site is intended to serve as a service point for researchers and interested parties who would like help with the practical implementation of good RDM practice.
